SCIENCE

INTRODUCTION TO PYTHON UNIT -1

Introduction :

- Features and Applications of Python;
- Python Versions;
- Installation of Python;
- Python Command Line mode and Python IDEs;
- Simple Python Program.

Python Basics:

- Identifiers;
- Keywords;
- Statements and Expressions;
- Variables;
- Operators;
- Precedence and Association;
- Data Types;
- Indentation;

- Comments;
- Built-in Functions- Console Input and Console Output,
- Type Conversions;
- Python Libraries;
- Importing Libraries with Examples.
- Python Control Flow:
- **Types of Control Flow:**
 - ❖ Control Flow Statements- if, else, elif, while loop,
 - ❖ break, continue statements,
 - ❖ for loop Statement;
 - ❖ range () and exit () functions

○ PYTHON PROGRAMMING

Very beginning learn about

What?

Where?

Why?

○ What is Python?

- Python is a popular programming language. It was created by Guido van Rossum, and released in 1991.
- OR
- Python is an interpreted, object-oriented, high-level programming language with dynamic semantics developed by Guido van Rossum.
- It was originally released in 1991. Designed to be easy as well as fun, the name "Python" is a nod to the British comedy group Monty Python.
- Python has a reputation as a beginner-friendly language, replacing Java as the most widely used introductory language because it handles much of the complexity for the user, allowing beginners to focus on fully grasping programming concepts rather than minute details.

○ Where It is used for?

- web development (server-side),
- software development,
- mathematics,
- system scripting.
- Processing [big data](#)
- Fast prototyping
- Developing production-ready software
